

Medical Image Analysis Report

Patient Name: Hey
Age: 99 years
Gender: Female
Scan Type: MRI
Date: 2024-12-08 22:26:52

Analysis Results

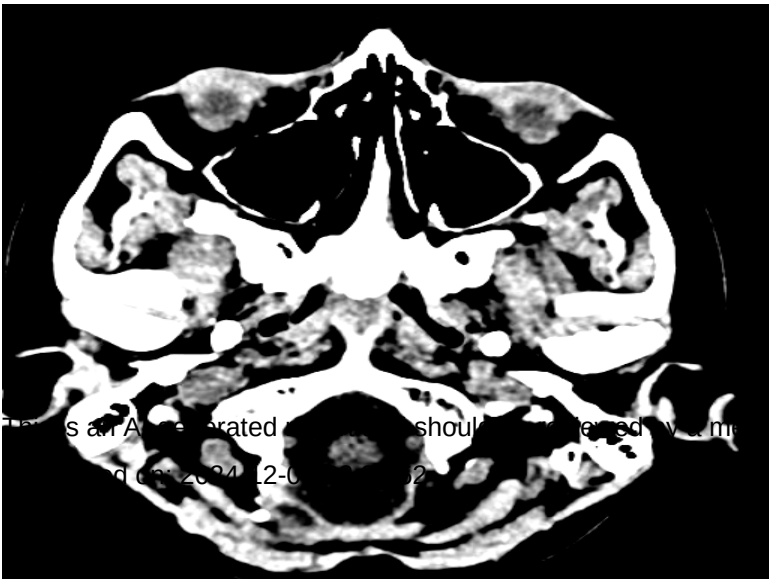

Diagnosis: meningioma
Confidence: 93.78

Clinical Assessment

Meningioma detected - requires regular monitoring. May need surgical intervention if symptoms develop or tumor shows growth.
Follow-up MRI scans recommended every 6-12 months.

Follow-up Actions:

- Follow-up MRI in 3-6 months
- Monitor for new or worsening symptoms
- Regular neurosurgical evaluation
